Report -

Communicate to impress
- Communication is defined as it is an act of send information from 1 person to another.
- 2 types of communication one is verbal and another is non-verbal.
- Eg for verbal communication is direct speaking, writing speaking or through phone calls.
- Eg for non-verbal communication is paralanguage, guesture, facial expressions.
- Barriers in communication are physical, cultural, gender, psychological, language, perceptual.

Deliver Presentations with Impact :
- Do the presentation with few slides.
- Use a single word or sentence and then elaborate as your present.
- Jargon and Slang should be avoided.
- Abbreviated words. Should be used only after using the full form for first time.
- Use templates matching the need of the topic/subject.
- Images speak louder than words.
- Background to be simple.
- The language used should be simple and understand by all.
- End with a thank you slide, so that audience is aware that it is the end of session.

Develop Soft Skills for the Workplace :
- Soft skills are people skills that are difficult to quantify and measure.
- Soft skills are Communication skills, Time Management, Self confidence, Business Etiquette, Goal setting, Team work.
- These skills helps to maintain healthy relationship.

Soft skills are acquired by improving the personality traits and learning new skills required.

Course: The python mega course

Topic:

Introduction
The Basics: Small Program

Name: Jagadeesha Hegde

USN: 4AL17EC036

Semester & Section: 6th A-ec

The Basics: Data Types
The Basics: Operations with Data Types
The Basics: Functions and Conditionals
The Basics: Processing User Input
The Basics: Loops

AFTERNOON SESSION DETAILS

Image of session
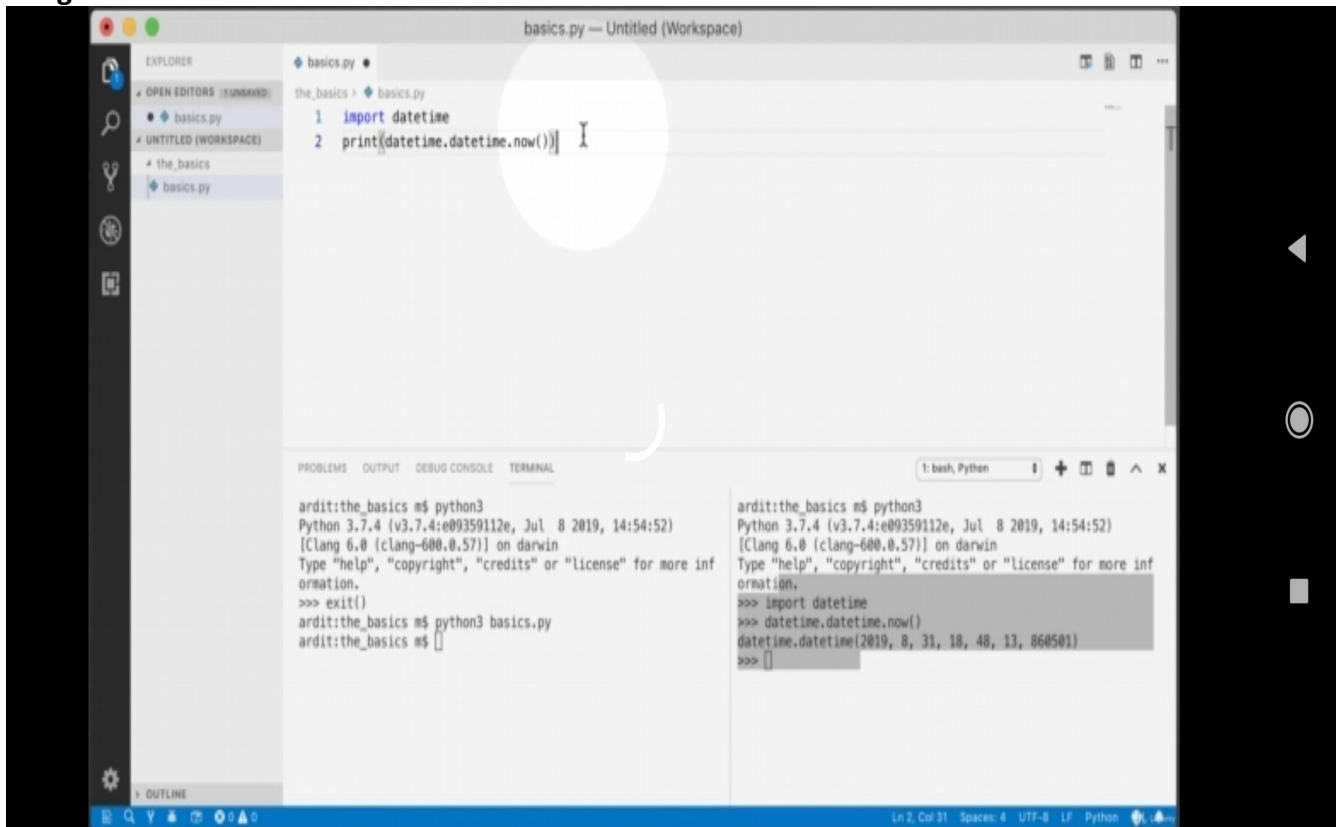

Report

- Introduction to python and its origin.
- Procedure to install python in mac and windows.
- Python is the easiest programming language because user need not think about the syntax and it is simple.
- Usage of variables and constants.
- Operations on numbers based on precedence rule.
- Python is a dynamically typed language. It doesn't know about the type of the variable until the code is run.
- Casting is used to convert a variable value from one type to another.

- String datatype is assigned to a variable by representing data with single or double quotes.
- A list is a data structure in Python that is a mutable, or changeable, ordered sequence of elements.
- A tuple is an immutable sequence of Python objects. Tuples are sequences, just like lists.
- The differences between tuples and lists are, the tuples cannot be changed unlike lists and tuples use parentheses, whereas lists use square brackets.
- Dictionary in Python is an unordered collection of data values, used to store data values like a map.

Python Dictionary are defined into two elements Keys and Values. Keys will be a single element. Values can be a list or list within a list, numbers, etc.
